Rose Silletto
IGME 102, Section 2

Assignment:
Project 2

Description:
This project creates an interactive map of the United States which visualizes US Census health data for various localities.

User Responsibilities:
The user can change which localities are displayed based on factors such as population and demographics. The user can also change what set of data is being visualized, display the names of each locality, and change the size of the visualization.

Notes:

- The legend explaining the visuals was created in VS Code using a method

- I requested a one-day extension until Wednesday

- I am aware that I am turning the project in multiple days past the extended deadline
